

# la marzocco technical bulletin #169

## Pump Motor Capacitor

August 2, 2021

This technical bulletin is to inform you of the temporary change of the 10 $\mu$ F capacitor in our L290/8UL pump motors, due to its current and future unavailability from our supplier. Currently we are using an alternative model, which can be recognized by its black plastic cap and orange cable. Despite the difference in appearance, the temporary capacitor is completely interchangeable with the older capacitor and they have same technical specifications.

We will soon be changing to a new and final capacitor with an aluminum cap similar to the previous model. This new capacitor will also be completely interchangeable with the older capacitor and will have the same technical specifications.

The temporary capacitor will not be available as a spare part, as we expect to be switching directly to the final model with an unchanged part number of L290/3C.

Do not hesitate to contact our solutions team with any questions you have about this technical bulletin.
