New solenoid valves on Linea Classic S

February 6, 2025

Dear Friends,

Parker solenoid valves were introduced into production for the standard version of the Linea Classic S (without the group-cap option), starting from serial number LS017511.

These valves are specifically designed for La Marzocco, featuring a stainless-steel base. While Parker valves are fully interchangeable with ODE valves, when replacing valves, we strongly advise matching the existing brand of valves currently in the machine. ODE to ODE; Parker to Parker.

The 3-way brew valve includes an integrated .8mm flow restrictor, designed for easy removal, inspection and cleaning; eliminating the need for the previously used restrictor in the copper tube. The Parker 3-way brew valve (B.3.017) should not be used in place of an ODE 3-way valve for the steam boiler.

Please note when replacing 3-way brew valves of different brands:

- From ODE → Parker = remove inline restrictor (Gicleur) and rotate electrical connection 180°
- From Parker → ODE = install restrictor (Gicleur) and rotate electrical connection 180°

**B.3.017 Brew Valve (.8mm)
3-Way**

**B.3.019 Hot Water Valve (2.5mm)
2-Way**

**B.3.021 Autofill Valve (1.5mm)
2-Way steam boiler**
